- The DarkNite® Calendar is a yearly aid in planning your observing sessions.
- Each of the daily circles is a clock face indicating the hours of darkness between 6 pm on that day and 6 am the following morning.
- Darkness is defined as the time from 30 minutes after sunset till 30 minutes before sunrise in which the moon is not above the horizon.
- The lunar phase for each day is shown below the clock face (new moon - 0%, full moon - 100%).
